LGBTQ+ Age Status in the US

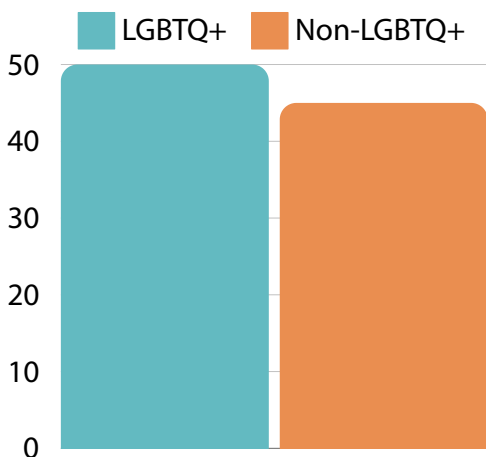

The graph shows that LGBTQ+ adults in the US are typically younger than non-LGBTQ+ adults. It breaks down both groups by age ranges, showing the percentage of each group in different age categories.

Mental Health Challenges By Age

The bar graph illustrates the disparity in mental health between LGBTQ+ (blue) and non-LGBTQ+ (orange) adults in the US. LGBTQ+ respondents reported significantly higher levels of anxiety and depression symptoms compared to their non-LGBTQ+ counterparts.

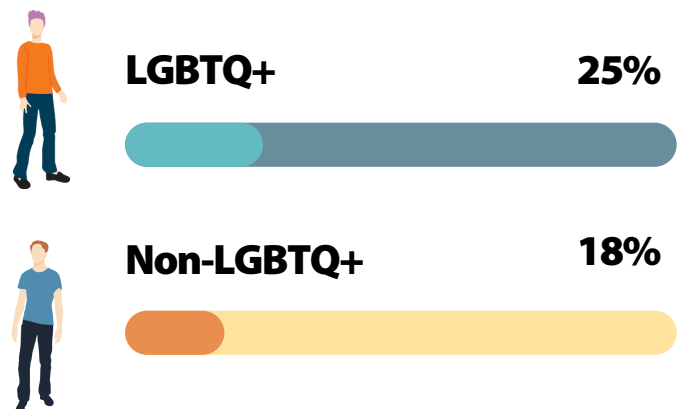

Chronic Conditions

Half of LGBTQ+ individuals said they have a health issue that requires regular check-ups, medical treatment, or medicine. In contrast, 45% of non-LGBTQ+ people reported having such health issues.

Health Profile

25% of LGBTQ+ individuals report that they are in poor health, compared to 18% on non-LGBTQ+ people. This gap is larger among low-income LGBTQ+ and those on Medicaid.
